Q a) CQlsh > Create keyspace student;
   with replication = {'class': 'simple stratgy'
   'replication-factor': 1 };

   CQlsh > use students;

b) CQlsh : Students > Create table student
   info (student-id int primary key,
   student_name text, date_of_join timestamp,
   sem int, dept-name text);

c) CQlsh : Students > describ student_info;
   CQlsh : Students > begin batch:
   ... insert into student info (stud-id,
   stud-name, date-of-join, sem, dept-name)
   ... values (131, 'Penguin', '2019-12-19', 3, "CSE")
   ... apply batch;

   CQLSh : Students > Select* from student info;

d) CQlsh : Students > update student info
   .. set stud-name = "Eshwar"
   ... where stud-id = 121;
   CQlsh : Students > select * from stud-inp;
